Ricerche & Tecnologie

SARAS is proud to announce
that its wide experience
can be accessible
to selected refining operators,
through its own
technology company
SARTEC

SARAS is the owner and operator of one of the largest and most complex refineries in Europe, built in 1963 and continuously improved and developed since then.

Continuous focus on workforce professional skills and state-of-the-art technology have been key factors for a story of success that spans over more than 50 years.

Creating strong relationships with strategic partners and suppliers has given SARAS access to world class technologies otherwise available only to major corporations.

SARTEC, a company fully owned by the SARAS Group, provides consulting services that are flexible and tailored in accordance to specific customer needs, ranging from the simple helpdesk to thorough Business Improvement Programs.

The support can be delivered in different ways: short reports, technical studies, webinars and class training, partnering with local management.

SARTEC expertise differs from what proposed by other consultants, being the result of decades of "hands-on" practice, that in many cases has provided innovative and tested solutions to licensors and technology suppliers.

SARTEC can make available local contact centers, in association with qualified partners to enable faster and more efficient interactions with customers.

SARTEC can deliver valuable advice in all the operations areas:

- Process improvement
- Operational excellence
- Supply chain optimization
- Asset reliability and maintenance cost optimization
- Energy efficiency
- Environmental compliance

In addition to that, **SARTEC** can provide engineering studies for revamps and debottlenecking, process automation and control advanced solutions, laboratory testing and support to hydroprocessing catalyst selection thanks to one of the few supplier-independent pilot plant facilities in Europe.
